## ABSTRACT

This paper provides a sample of a  $\LaTeX$  document which conforms, somewhat loosely, to the formatting guidelines for ACM SIG Proceedings.<sup>1</sup>

## CCS CONCEPTS

• **Computer systems organization** → **Embedded systems**; *Redundancy*; Robotics; • **Networks** → Network reliability.

## KEYWORDS

Many of the conferences and journals such as OOPSLA, PLDI, POPL, FSE, ICSE, and UIST etc. require revised manuscript submissions along with a clear diff to facilitate easy tracking of changes. Recently, as we navigated the revision process for our submissions, we observed a shared struggle within the research community. Like most people in Computer Science research, we use LaTeX and we tried to use `latexdiff` [1] to show modifications for our revisions. Initially, we faced several issues which were gut-wrenching on the final day of revision submission. It took us to try several available options, and finally, we figured out the correct options to generate a diff PDF to track the changes.
